Introduction
The Rapid Cycling Brassica Collection, RCBC, initially known as the Crucifer Genetics Cooperative, was established in 1982 by Paul Williams to develop, acquire, maintain, and distribute seeds from and information about various genetic stocks of rapid-cycling Brassica and Raphanus species.

The RCBC is located at the University of Wisconsin – Madison, in the College of Agricultural and Life Sciences' Department of Plant Pathology.

Brassica and Raphanus species seed varieties:
- Brassica rapa (campestris)
- Brassica nigra
- Brassica oleracea
- Brassica juncea
- Brassica napus
- Brassica carinata
- Raphanus sativus

Please Note: Seed stocks from the Rapid Cycling Brassica Collection are sold to science researchers with prior approval. We are a small research collection with limited capacity.

Carolina Biological Supply (800.334.5551) has the capacity to provide seed and services for teachers and school districts.

If you are a science researcher interested in ordering Brassica seeds from the Rapid-cycling Brassica Research Capacity, request a catalog by writing info@fastplants.org
